Sitemap

AT

- Homepage with navigation bar that link to all four pages
- Every page, including homepage, has an icon link to resume, Linkedin and
 GitHub in the footer
- Blogs page includes a "Read more" link that takes the user to an upcoming blog. Blog links back to Portfolio
- Contact page includes email and links

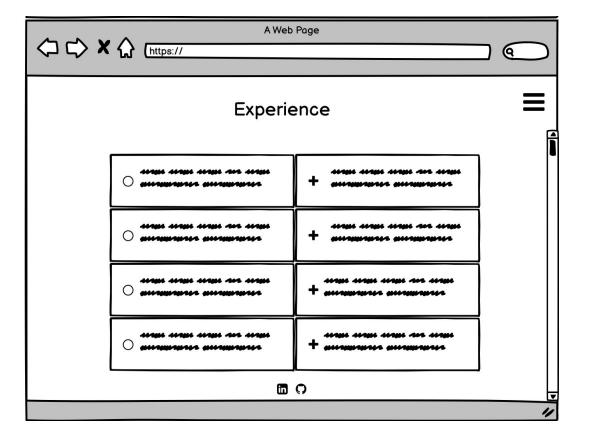

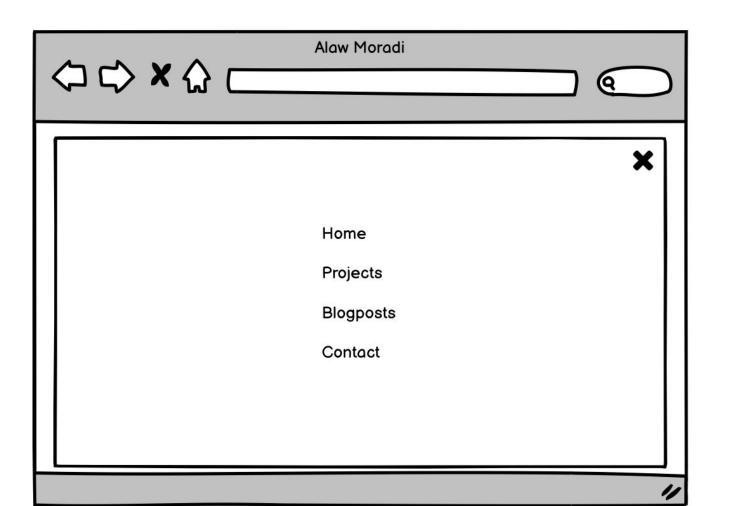

All pages link to Resume Linkedin GitHub

Wireframes and Process - First drafts

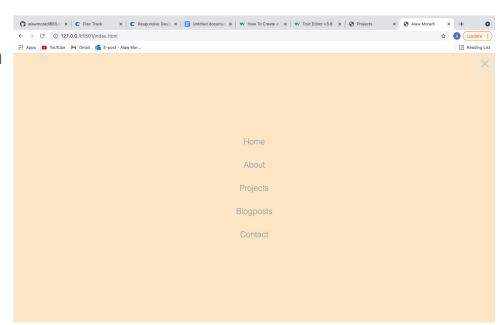

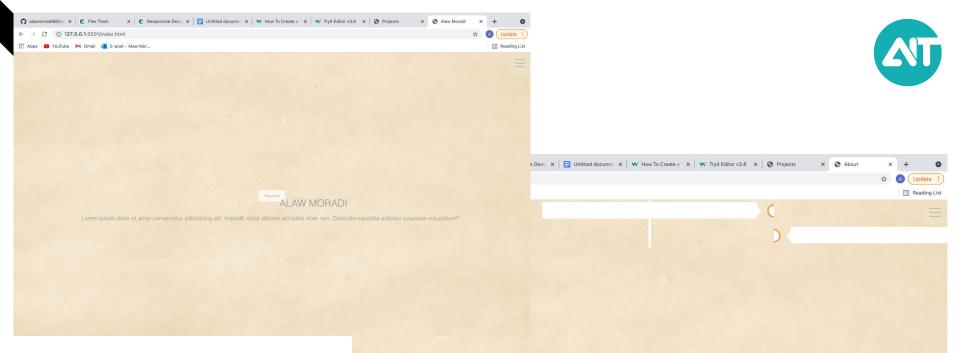

First try ..

- Did one wireframe for mobile started coding
- Got overly interested in how to create a hamburger bar with an animation
- Went back to wireframe to finish all pages
- Attempted to code according to the complete wireframe ..

Hello! I am Alaw, nice to meet you!

I am a full-stack developer in progress at Coder Academy, from Stockholm, Sweden. With a background in primary school education, specializing in the afterschool program, I have been taking part in various forms of informal learning and am now on my path to a career change working towards **education development**.

Currently working with CSS finding interactive design interesting and valuable for future designing of educational material to catch young students maximum focus.

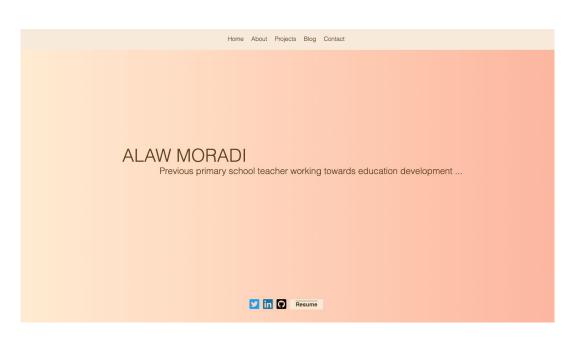

enjoy a good cup of black filter coffee, as any other Swede, all things nature, swims, hikes and exploring amazing national parks. Still loving the big city life, nothing really beats a good jazz venue and everything vintage. I would happily get paid in some good vintage jackets.

Education & Experience

 Quickly realised - I do not have the time to learn how to solve this now

- START OVER
- New idea: Simple, responsive, informative
- Similar to previous wireframe

Hello! I am Alaw [all · love], nice to meet you!

I am a full-stack developer in progress at Coder Academy, from Stockholm, Sweden. With a background in primary school education where I specialized in the afterschool program, I have been taking part in various forms of informal learning and am now on my path to a career change working towards *education development*.

Currently working with CSS finding *interactive design* interesting and valuable for future designing of educational material to catch young students maximum focus.

I enjoy a good cup of black filter coffee, as any other Swede, all things nature, swims, hikes and exploring amazing national parks. Still loving the big city life, nothing really beats a good jazz venue and everything vintage. I would happily get paid in some *good vintage* jackets.

Experience & Education

Components

- Hero
- Semantic tags such as <nav> <section> <footer> etc
- Icons for HTML, CSS, Ruby, Rails
- Clickable icons for social media and email
- Hover effects in navbar and over icons
- Horizontal navbar with centered clickable pages, responsive for all devices
- "Read more" links for each blog post that takes user to upcoming blog

Challenges

Lessons

- Design Colours? Placements? Sizing?
- Git procedure
- To accomplish what I wanted with the time and knowledge limit
- Flexbox understanding instead of experimenting (next slide)

- Spend more time on wireframe and follow it!!
- How and why we use GitHub
- Learning by doing, coming out with bigger understanding of the first weeks
- Research before deciding and attempting

- Finish details such as place components on contact page and style the skills icons
- Upload to Netlify
- Finish README.md
- XML
- SRI

Summary

- Started without a complete wireframe had to start over
- Process simplified and manageable
- Soft tones, inviting, details
- Biggest lesson use wireframes properly and plan before coding
- Coding is fun!

Thank you!
